

Energy powers almost everything we do. It powers our homes and our businesses.

It cooks our food and heats our water. It gives us light and it powers our day.

But the energy system of tomorrow may look very different than what we know today.

At PECO, we're driving innovation, providing advanced energy services for our customers today and tomorrow. Every day, we are delivering on our promise of safe,

reliable, affordable and clean energy. As

part of this effort, we are developing

concepts and programs that will

transform the energy experience for our

customers and take it to a whole new

level. Microgrids, solar arrays, smart

streetlights, advanced outage management

systems, and new tools and resources

powered by big data are just a few of

the technologies utilities like PECO are

engaging in to take the services they

provide to a whole new level. We provide

an essential service that our customers

count on, and it's our job to ensure we

meet the expectations of our customers

today and tomorrow.
